

Record 4 - Riverbend Family Medicine - Office Visit

****Date of Service:**** 01/15/2025

****Provider:**** Dr. L. Voss (PCP)

Chief complaint: f/u post-op.

Patient here for routine post-surgical follow-up per ortho instructions. Reports right knee incision healing well. Reports "some tightness" in the calf and getting winded more easily than usual, which she attributes to being less active than normal during recovery. No chest pain reported. Denies fever.

Exam: right knee incision clean/healing, mild residual swelling of right lower extremity, not tender. Lungs clear to auscultation.

Assessment: Normal post-operative recovery, mild deconditioning. Plan: continue home exercise program, no imaging indicated at this time. Return to clinic in 4 weeks or sooner if symptoms worsen.
