

Record 4 - Overlake Regional Medical Center - Emergency Department Note

Date of Service: 05/14/2026

Chief complaint: Blood in stool, dizziness.

HPI: 67-year-old female on warfarin for atrial fibrillation, presents with 1 day of melena and lightheadedness. Reports she "never got a call back" after a lab a few days ago but did not follow up herself either.

Labs: INR 8.4, Hemoglobin 7.1 (baseline reportedly ~13 per patient).

Assessment: Upper GI bleed, supratherapeutic INR, likely warfarin-related.

Plan: Admit. Reverse anticoagulation, transfuse, GI consult for endoscopy.
