

Record 1 - Fairview General Hospital - Emergency Department Note

****Date of Service:**** 06/10/2026

****Provider:**** Dr. L. Fenwick, Emergency Medicine

Chief complaint: Fever, confusion, low blood pressure.

HPI: 73-year-old female brought in by family for 2 days of fever, confusion, and decreased oral intake. Family reports she has seemed "not herself" and increasingly drowsy today.

Vitals: Temp 102.4F, HR 118, BP 84/52, RR 24, SpO2 91% on room air.

Labs: WBC 18.4, Lactate 3.8, Creatinine 0.9 (baseline, per prior outside records), BUN 22.

Assessment: Sepsis, likely urinary source given urinalysis findings, with associated hypotension.

Plan: IV fluid resuscitation, blood and urine cultures drawn, empiric IV piperacillin-tazobactam started, admit to ICU for close monitoring.
