

Record 2 - Fairview General Hospital - ICU Admission History & Physical

****Date of Service:**** 06/10/2026

****Provider:**** Dr. T. Anand, Hospitalist

History: 73-year-old female with history of hypertension and osteoarthritis, admitted from the ED with sepsis of likely urinary origin, presenting with fever, altered mental status, and hypotension.

Baseline renal function: Creatinine 0.9 on outside records from a primary care visit 3 months prior, described there as "stable, at patient's baseline."

Assessment: Sepsis with hypotension, responding to fluid resuscitation. Mental status improving. No acute kidney injury at this time; renal function within patient's known baseline.

Plan: Continue IV antibiotics pending culture results, IV fluids, strict intake/output monitoring, daily basic metabolic panel to trend renal function during recovery.
