

Record 16 - Fairview General Hospital - Infectious Disease Consult Note

****Date of Service:**** 06/22/2026

****Provider:**** Dr. S. Whitcombe, Infectious Disease

Reason for consult: Antibiotic de-escalation planning given clinical improvement in sepsis.

Assessment: Sepsis of urinary origin, clinically improved. Recommend transition to targeted oral therapy per culture sensitivities, continuing for a total 14-day course from initial positive culture.

Plan: De-escalate to oral nitrofurantoin. ID to follow as needed; no further routine follow-up planned unless clinical status changes.
