

Record 7 - Crestline Urgent Care Group - Peer Review / Quality Note

****Date of Service:**** 03/20/2026

Internal quality review note regarding the 03/02/2026 urgent care visit: chart notes right lower quadrant tenderness was documented on exam but no imaging or lab work was ordered at that visit, and no explicit instruction was given to follow up sooner than "if worsening." The 03/03/2026 telephone triage note reflects reported worsening symptoms including inability to stand upright, which was managed with continued conservative advice rather than a recommendation to be seen in person same-day.
