

Record 5 - Overlake Regional Medical Center - ICU Progress Note

Date of Service: 03/06/2026

POD#2. Patient with evolving sepsis post-op, on IV piperacillin-tazobactam, now also started on vancomycin for broader coverage given persistent leukocytosis. Low-grade fever overnight, 100.9F max. Hemodynamically stable, no pressor requirement. Abdominal drain output serosanguinous, decreasing.

Plan: Continue antibiotics, trend WBC and lactate, advance diet as tolerated when ileus resolves.
