

SYNTHETIC TEST DATA - NOT A REAL PATIENT

Crestline Family Medicine - Office Visit

Date of Service: 03/15/2026

Provider: Dr. M. Okafor-Ellis

Chief complaint: Follow-up for hypertension.

HPI: 58-year-old male returns for routine blood pressure follow-up. Reports occasional headaches in the mornings over the past two weeks. Denies chest pain, vision changes, or shortness of breath. Currently taking lisinopril 20mg once daily.

Exam: Blood pressure 162/98, repeated at 158/96. Heart rate 76 and regular. No peripheral edema. Fundoscopic exam deferred.

Assessment: Hypertension, poorly controlled on current regimen despite medication compliance per patient report.

Plan: Increase lisinopril to 40mg once daily. Recheck blood pressure in 2 weeks. Basic metabolic panel ordered to assess renal function given dose increase. Counseled on low-sodium diet and home blood pressure monitoring twice daily with a log to bring to next visit.
