

Record 2 - Cascade Physical Therapy - Initial PT Evaluation

Date of Service: 02/10/2026

Provider: Melissa Tran, PT, DPT

Patient referred by Dr. Kowalski for right shoulder pain s/p fall. Patient reports pain 6/10 at rest, 8/10 with overhead activity. Works as a warehouse supervisor, reports difficulty lifting boxes overhead at work.

Patient notes he is a former smoker, quit approximately 8 years ago, previously about a pack a day for 15 years.

Objective: Right shoulder AROM flexion 110 degrees (limited by pain), abduction 95 degrees. Positive Hawkins-Kennedy impingement sign. Positive empty can test with pain, though strength difficult to fully assess secondary to pain.

Assessment: Right shoulder impingement syndrome, subacromial. Findings also consistent with possible rotator cuff pathology - recommend patient follow up with referring provider regarding imaging if not already planned.

Plan: Begin PT 2x/week - pendulum exercises, subacromial mobilization, progressive strengthening once acute pain subsides. Reassess in 2 weeks.
