

Record 4 - Meridian Occupational Health - Follow-Up Visit

Date of Service: 03/03/2026

Provider: Dr. A. Kowalski, DO

Patient returns, referred back by physical therapy given lack of progress after 6 visits. Continues to report right shoulder pain with overhead activity, now also reporting some night pain waking him from sleep, new since last visit.

Patient's mother had a hip replacement in her 60s; patient unsure of the underlying cause.

Physical exam: Persistent painful arc, positive impingement signs, subjective weakness with resisted external rotation.

Assessment: Right shoulder pain, not improved with 6 weeks conservative management including PT.

Plan: Will order MRI right shoulder without contrast to further evaluate for rotator cuff pathology. Continue current PT program pending imaging.
